

VIDEOCONFERENCING

a new way of doing business

VIDEOCONFERENCING *a new way of doing business*

Videoconferencing is a remote meeting between two or more individuals present in geographically dispersed locations. More simply, it means that users can meet and share information virtually from wherever they are using Videoconferencing equipment and communicate using any network available with them. A Videoconferencing meeting is usually brief and more focussed than a face-to-face meeting. Benefits available to business through ability to meet and work with others, over a distance, are extensive. It can enable top management to quickly and effectively communicate with employees sitting in multiple locations. Videoconferencing helps to reduce travel costs, improves use of executive time and speeds up decision-making process.

NIC is providing Videoconferencing services from more than 700 cities in India. This is the largest Videoconferencing network in India, spread across length and width of the country. The Videoconferencing services of NIC are availed by Central as well as State Government Ministries and Departments.
